Boom Lifts

Boom Lifts Training Burlington - Boom lifts are equipment that has a platform that could be lowered or lifted to many heights, therefore making this piece of equipment an important necessity in a wide variety of professions. Available in many different specialized kinds such as aerial platform lifts, scissor lift trucks, and knuckle boom lifts, each version operates very specifically.

The familiar aerial lift variation is regularly utilized at snowboarding lodges to transfer people who are not comfortable with the skiing lift. Effective in a manner comparable to that of an elevator, snowboarders are transported up the mountain in stages, stopping at stations along the way until they arrive at the top. Aerial platform lifts are also used in construction, moving personnel securely up and down the sides of multi-level building sites.

Scissor hoists are quite frequently utilized by utility companies as the ideal method to safely facilitate employees to fix and work on cables and wires attached to poles. Telephone, cable television and power companies have relied on the proficiency of this style of boom lift for years.

The knuckle boom lift is created for use within locations of uneven terrain and where the need to reverse course might be required. This style of boom lift has the capability to fit in tight spots where a scissor jack cannot fit. Working between numerous equipment in a production plant or in close proximity stuck between two walls, the knuckle boom also features a standard platform fitted with rails for security and employee safety.

Depending on the work requirements and the kind of work to be completed will determine the appropriate type of boom lift to choose. Luckily, there is a model suited for practically any application.
